Joomla

- Joomla
- Add User data from Joomla

Joomla

JOOMLA 4.x Download Joomla 4 version

Steps to add your calculator to your Joomla pages

- Add your credentials to Component options (System->Setup:Global configuration -> XLSJuice)
- Create a XLSJuice module and enter your Calculator Id. You can get it at your XLSJuice Calculator Dashboard, step 4 of the configuration process.
- Publish your Joomla module at your site, inside any article, or placed into a template position, (it works like any other Joomla module).

JOOMLA 3.x Download Joomla 3.x version

Steps to add your calculator to your Joomla pages

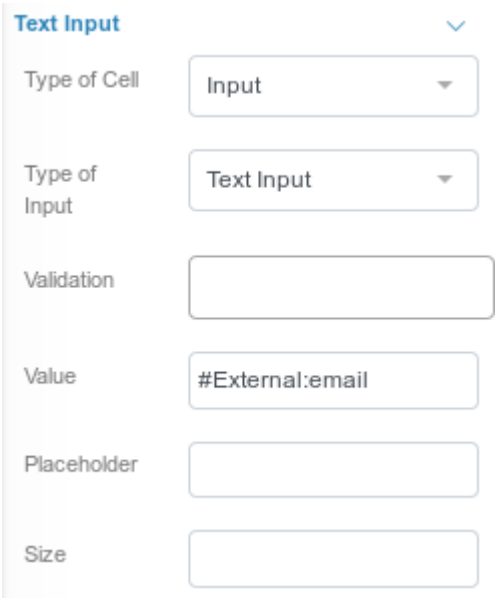

- Enter Components->XLSJuice and add your credentials to Component options (clicking 'Options' button at the right upper corner)
- Create a XLSJuice module and enter your Calculator Id. You can get it at your XLSJuice Calculator Dashboard, step 4 of the configuration process.
- Publish your Joomla module at your site, inside any article, or placed into a template position, (it works like any other Joomla module).

Add User data from Joomla

You can import actual logged-in user data from your Joomla to your form configuring 'Value' field on your input Text or Hidden.
Type '#External:' followed by the data from user you want to get. Here is a list of data available with the value to use:

- Id: **#External:id**
- Name: **#External:name**
- User Name: **#External:username**
- Email: **#External:email**
- Groups (separated by espaces): **#External:groups**

Note that you'd need to install this Joomla component and publish the module with the calculator id following the instructions in Joomla Backend => Components => XLSJuice.

With this example settings you'll get at your form one text input filled by default with the actual joomla user email.
